

CORROSION INHIBITING VpCI® POWDERS

CASE HISTORY

Crude Oil & Gas Modules Preservation

PRODUCTS

VpCI®-609 S

VpCI®-337

PROBLEM

GPC needed to preserve piping internals for Preassembled Racks (PARs) and Preassembled Modules (PAMs) for Zadco's UZ-750 project in the UAE. Modules were fabricated onshore and sailed to the Zakum Islands for final fit up, requiring a preservation period of up to two years.

APPLICATION

Cortec® VpCI® Technology and two specific products were identified for use. VpCI®-609 S was fogged into CS (carbon steel) and LTCS (low temperature carbon steel) systems, while VpCI®-337 was fogged into systems containing yellow metals.

CONCLUSION

Cortec® has a long track record within the ADNOC Group of companies. Cortec® and Kanoo were happy to support Zadco in achieving effective preservation in harsh climatic conditions found in the Arabian Peninsula.
